

Fast Inventory Valuation

Stop waiting | Start analyzing

How does it work?

Our Fast Inventory Valuation report runs within NAV, but uses a direct SQL Server connection to retrieve results in a fraction of the time the base NAV report requires.

What versions of NAV is the Fast Inventory Valuation report available for?

NAV 2009 and NAV 2013 are supported. The product is exclusively designed for the Role-Tailored Client, and does not support the NAV 2009 Classic Client.

How do we buy the Fast Inventory Valuation report?

The product is available through Microsoft partners / resellers on behalf of their customers. Contact your partner to find out more. Partner inquiries can be directed to sales@epimatic.com.

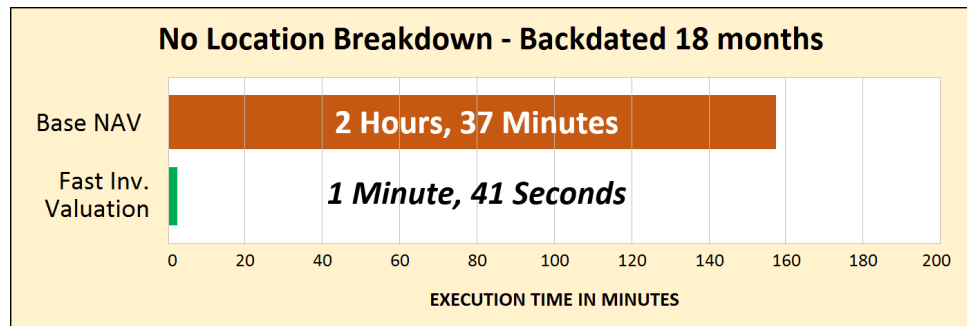

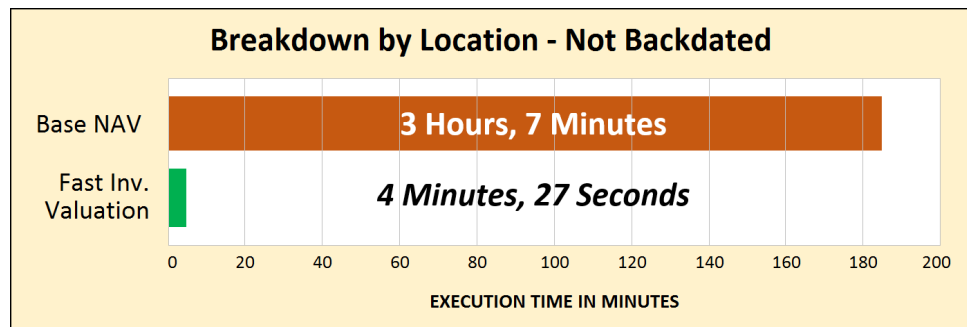

How much will this cost?

The product is priced similar to a typical custom developed report, with a very simple implementation/rollout. Contact your NAV partner or sales@epimatic.com for pricing details.

Microsoft Dynamics NAV is a great product, but when your item ledger gets large, it can be a patience test trying to generate an inventory valuation report. The situation is made worse because these numbers are typically required during time-pressured period ends.

With epimatic's Fast Inventory Valuation report, NAV can provide inventory valuation details in a fraction of the time. The benchmarks below from an actual customer database (for two different run scenarios) attest to the speed of the product:

With our Fast Inventory Valuation report, you can stop relying on the typical inconvenient workarounds for this performance issue:

- Starting a second NAV session (and consuming an additional user license)
- Starting the report at the end of the day and hoping it finishes by the morning
- Implementing processes to run the report overnight on the server

The report supports full item filtering, location/variant breakdowns, backdating (As Of Date) and provides an Export to Excel option in data table format (suitable for pivot table analysis).

Spend less time WAITING for your data, and more time ANALYZING it. Contact your Microsoft Dynamics NAV partner or epimatic directly for more details.
